# Immersive visualization of space probe voyages — Between data proprietary and public outreach

Björn Grieger

We create visualizations of planetary probe data for planetarium fulldome projection:

- Precomputed simulations to be presented like a movie
- Virtual reality environments for realtime exploration

For a presentation in the Planetarium Hamburg in April 2005, we recently featured the landing of the Huygens probe on Titan. Our products are different from shows based on artists' impressions as we derive our visualizations from the real data.
